ENVIRONMENTAL POLICY

To follow the policies and procedures in which Energy Procurement Services conducts its business, and to insure that any economic and business decisions which are made, do not harm the environment in the short and long term.

We recognize that we can have a direct and indirect impact on the environment, we therefore must always strive to improve and promote sound economic practices through it's economic and company strategies.

We will manage the way we use land, and raw materials responsible, and avoid the use of materials that may cause harm to the environment

We will minimize consumption of, energy, and water, reduce waste, air, and water contamination.

We will where ever possible recycle and or reuse waste.

We will monitor and audit environmental performance on all of our operations as well as our sub- contractors

We will promote environmental awareness, training and responsibility among our employees, customers, suppliers, and the community at large.

We will conform to environmental legislation as well as safety and health legislation.

We will investigate all deviations and non-conformance with any of our sub-contractors or their employees, and take corrective action

We will insure, that we take the environment into consideration on any projects.
